

DL 3220

NEW

CHU 2725 | RM 91

With very good spring vigour and early growth, DL 3220 continues to add strength to an already very strong product offering. DL 3220 is tall and produces ears with up to 18-20 kernel rows per ear. Big yield on tall plants makes this a good silage option also. Husks flare after maturity for an attractive look at harvest time and aids in dry down. DL 3220 is very good for plant health, ear mould resistance, and will be a good choice whether you feed hogs, cattle, or deliver your grain to the elevator. Diversify your hybrid selection by adding DL 3220 to your farm.
