

DL 3402

NEW

CHU 2750 | RM 92

With exciting new genetics, DL 3402 is a high yielding hybrid, and continues to prove De Dell's work of adding yield on your farm. With above average spring vigour, DL 3402 is a tall hybrid with excellent grain yield potential. This hybrid will also make a high yielding silage hybrid with very good digestibility and silage quality. Large ears with soft caps result in very fast dry down in the fall for grain harvest. With highly digestible stalks, this hybrid should be harvested timely for high moisture and/or grain.
