

DL 4910 NEW

CHU 2975 | RM 99

DL 4910 is a tall, high yielding, and very healthy hybrid. DL 4910 starts the season vigorously with dark green leaves. With very good general plant health, DL 4910 is an excellent option if you are looking for tar spot disease resistance. DL 4910 also has good ear mould resistance for low vomitoxin grain. Widely adapted, DL 4910 can be used as either grain or silage. With good standability and late season intactness, it is an “easy to harvest hybrid” late into the season. DL 4910 is an excellent alternative or companion to DL 3905 and DL 4555.
